

IN THE SPECIFICATION

Please amend the paragraph of page 1, lines 5-6 as follows:

This application claims the benefit of the U.S. Provisional Application No. 60/427,949 entitled "Personal Navigation" filed on 21 November 2002. The entirety of the foregoing application is hereby incorporated herein by reference.

Between the paragraphs of lines 7-14 and 16-22, please add the following new paragraph:

According to another embodiment, search terms are saved as folders as soon as a user selects (e.g., "pushpins") a website within their results to save. Users' selected websites are saved within the search term folder and comprises that "saved search." Users select a result without having to click through to the result. Users may need an identifier (such as a pushpin) to select their sites from within their search results. Pushpin selection may be effected, for instance, by depressed pin graphic or color denotation. Saved searches are saved to Favorite Places, the Saved Searches page, and the My Searches page. Whenever a user performs a new search for a term that has an existing saved search, the saved results are displayed at the top of the results set. Depressed pushpins, for example, may denote existing saved sites within the results set.
